

5 - STEP VEGIE PATCH

1

Pick a sunny spot

Your area doesn't need to be big, you could even use a pot!

2

Good soil

Use good quality potting mix, or add compost to garden soil. This will allow the vegies to absorb nutrients and hold water long enough to grow.

3

Choose your vegies

Choose those that are in season, easy to grow and mature quickly. Beans, snow peas, cherry tomatoes and salad greens are a great place to start.

4

Time to plant

Pay attention to the spacing guidelines so your vegies have enough room to grow. Don't forget to label them!

5

Help them grow

- Water your vegies - 2-3cm per week should do.
- Remove weeds - they take the nutrients your vegies need to grow!
- Mulch your garden - this will add nutrients to the soil and prevent weeds from growing.
